Equipment

I. Commercial Stations Equipment

A. Baggage Scale

1. Materials

a. Low profile model mounted above floor.

b. Preferably recessed-mounted.

c. Material to be stainless steel platter (or shroud) and galvanized base.

d. Must be shock-mounted to prevent sensor overloading and other damage.

2. Accessories

a. Baggage scale digital display

i. (2) LED (Light Emitting Diode) weight displays.

ii. One display is to be located on the public side of the counter facing the passenger.

iii. The second display is to be located on the agent side of the counter, facing agent.

iv. Numeric display must be adequately bright to be read in well-lit environments, red read-out preferred, and with a minimum font height of one-half inch (legible at up to 20'); verify ADA requirements that may supersede this minimum height requirement.

v. Stainless steel display mounting is preferred.

b. Data Feed

i. The unit must have the capability to feed baggage weight information to a printer or other system for the collection of data.
